ELEVA Absolute Return Europe - Class A1

31/08/2026
Monthly report

Investment objective and approach

- Aiming to achieve an absolute return over the medium term through capital growth
- Investing primarily in European equities and equity related securities on both a long and short basis
- Differentiated and disciplined bottom up investment philosophy complemented by a macroeconomic overlay to support sector positioning
- Flexible net exposure between -10 and +50% driven by fundamental idea generation and market volatility
- Recommended investment horizon : ≥ 5 years

Key figures

Net Asset Value	156.82 €
Total Fund Assets	4 979 879 820 €

Monthly Comment

European markets ended August marginally higher, with the Stoxx Europe 600 up 0.49% (net return), in a month of thin summer liquidity, sharp rate moves and persistent geopolitical uncertainty. The dominant driver was a global bond rout: sticky inflation, heavy AI-related debt supply and hawkish Fed minutes, revealing that several officials had favored a July hike, pushed the US 30-year yield to its highest level since 2007 and the 10-year to 4.75%, with markets pricing in meaningful odds of a September hike. The US-Iran standoff intensified as President Trump threatened an "economic D-Day" against Tehran, and Iran threatened to halt all oil exports, keeping oil prices supported for most of the month. The AI/momentum complex suffered another violent unwind mid-month, dragging down semiconductors and memory names, before partially stabilizing on Nvidia's bullish multi-year outlook. However, second-quarter earnings remained very supportive overall, helping the markets to edge up.
In this context, ELEVA Absolute Return Europe was down 0.06%.

The long book had a positive impact on performance and outperformed the move in relevant indices. Materials, financials and industrials were the main drivers of performance. Conversely, the performance of the short book was penalized by consumer staples, communication services and health care.
Anglo American was well supported and followed copper prices higher this month. Energy names like **Galp Energia** were in demand in light of the geopolitical context. Enzyme maker **Novonesis** upgraded its guidance, resumed share buy backs and convinced investors of its long-term prospects. Banks continued their successful run; **ABN Amro**'s results were well received and showed strong cost discipline along with better net interest income.
French stocks underperformed, investors started to reflect political risk and deteriorating debt fundamentals. **Engie**, **Société Générale** and **Orange** underperformed this month, despite publishing good results. There was also some profit-taking on **Coca Cola HBC** after a good run. **Straumann** fell after the CEO announced their departure.
The short book had a negative impact on performance, with index hedges and single name shorts costing performance. Consumer Staples, real estate and consumer discretionary were the positive drivers of short book performance. Nevertheless, it was not enough to compensate for the decline of financials, information technology, materials and industrials.
Regarding our proprietary macroeconomic indicators, the ELEVA Capital Index Europe (ECI) is still pointing upwards, as is the ECI China. The ECI Global is stabilizing at a high level. The impact of the Middle East conflict looks limited, growth expectations are likely to improve. In this context, companies should have strong earnings growth. The main risk would be a spike in yields. We note that corporates remain active in mergers and acquisitions and share buybacks.
Value on the long book decreased from 50.2% to 48.0% while cyclicals increased from 63.4% to 64.7%. Net exposure and gross exposure increased from 32.1% to 33.9% and from 153.5% to 156.5%, respectively.

Since inception, ELEVA Absolute Return Europe was up 56.82%.
