August 2026 Fact Sheet

This is a marketing communication. This is not a contractually binding document. Please refer to the prospectus of the UCITS and to the PRIIPs KID before making any final investment decisions.

Fund Description

Lazard Rathmore Alternative Fund is a hedged convertibles portfolio, best described as convertible arbitrage, where typically a long convertible bond position is hedged with a short stock position in the same company. Position-level hedges are actively traded in order to monetize market volatility. In addition to generating returns from credit and volatility ("betas"), the team's specialized approach focuses on extracting value from special situations and events ("alpha"), which supplements the traditional drivers of return to convertible arbitrage strategies and allows for a strategic, long-term approach to investing in the space.

Risk Rating

Key Risks Related to the Fund

There is no capital guarantee or protection of the value of the Fund. The value of your investment and the income from it can go down as well as up and you may not get back the amount you originally invested.

While the Fund may seek to profit from the prices of shares falling (i.e. taking short positions or shorting) as well as rising in value through the use of FDI, it is possible for the Fund to lose value on both the long and short positions, thereby increasing the risk of the Fund.

There are additional risks relating to the use of derivatives - the Fund invests in derivatives for the purposes of reducing exposure (hedging), gaining greater exposure, and speculating in the value of underlying investments. The use of derivatives to gain greater exposure to investments rather than by direct investment can increase the possibility for profit but also increase the risk of loss.

Key Risks Related to the Share Class

Shareholders who acquire shares after commencement of a performance period may be liable for a performance fee, even where there has not been an appreciation of performance of the relevant share class during the period in which those shares were actually held. Performance fees may be paid on unrealised gains which may subsequently never be realised.

Your shares will be hedged with the aim of reducing the effect of exchange rate fluctuations between their denominated currency and the base currency of the Fund. This may not completely eliminate currency risk and therefore, any residual risk may affect the performance of your shares.

See "Risk Factors" in the UCITS' Prospectus and Fund Supplement for more information about risks.

This Fund is actively managed. The Fund's performance is measured against the performance of any one or more of the HFRX Relative Value Fixed Income Convertible Arbitrage Index, S&P 500 Index, Russell 2000 Index, Bloomberg US Agg Total Return Value Unhedged USD, ICE BofA Global 300 Convertible Index, ICE BofA US High Yield Index and MSCI World Index (the "Benchmark"), which the Investment Manager has assessed to be the most appropriate Benchmark for measuring performance. The Fund is not constrained by the Benchmark as it has flexibility to invest in securities and asset classes not included in the Benchmark.

Commentary

Market Review

Equity markets recovered after posting losses for two straight months. The SPX Index rose +2.72% in August, reaching an all-time high, while the technology stock laden Nasdaq Composite gained +3.99%, approaching the highs seen in May of this year. Sectors that drove the market gains were Software, Telecommunication services, Energy, Materials and Healthcare. Lagging sectors were Utilities, Consumer Durables, Consumer Discretionary, Regional Banks, Industrials and Neoclouds. Bitcoin and Gold prices also had significant gains during the month, partly helped by the concerns about the rising government debt around the world, including the US where the Federal debt topped the $40 trillion mark during the month.

Economic data was supportive of risk assets with S&P Global Manufacturing PMI for August above 53, while the Services PMI rose to 56.8, a 20-month high. The second quarter earnings season concluded on a high note, with the S&P 500 Index constituents posting a spectacular 34% year-over-year earnings growth, significantly higher than the expected +24% gain at the beginning of July. For the full year 2026 earnings growth expectations stand at about +28% compared to the actual growth of about +13% in 2025. If the current expectations for 2026 are realized that would mark the highest level of annual growth since the Covid recovery year of 2022.

Stock volatility generally declined during the month, as the VIX Index fell from 15.99 to 14.92 month over month. The VIXEQ Index, which measures the individual stock volatility of the S&P 500 Index, fell sharply to end the month at 35.80 from prior month end's 44.42. Stock volatility fell due to overall improvement in equity markets and the end of the second quarter earnings season.

Global interest rates were volatile but stayed within a trading band during the month. But, in the last week of the month rates rose due to renewed focus on government debt burden in the advanced economies. Bond market participants became more concerned about the potential for rising rates due to Treasury Secretary Scott Bessant's actions to support the Yen and plans to buy long-term Treasuries while selling more short-term Treasuries. In addition, the Fed Chairman Warsh's comments at the Jackson Hole conference were interpreted as hawkish after he indicated that the Fed would have to act if inflationary pressures rose. The 5-year Treasury interest rate rose +5 bps during the month to end at 4.50%, while the 10-year rate rose +2 bps to end at 4.75%. Interest rate volatility, as measured by the ICE BofA MOVE Index, fell to 75.32 at the end of the month from 83.02 from the prior month end.

The US High yield market recovered during the month along with other risk assets. The ICE BofA U.S. High Yield Index posted a return of +0.99% during the month after a negative return of -0.29% in the prior month, pulling up the year-to-date return to +2.60% through August. The corporate credit spreads implied in the High Yield index narrowed to +285 bps from +308 bps over the month, helping the asset class during the month.

In the Convertible market basis (the change in the bond price adjusted for the stock hedge) remained modestly weak for the second month, as stock volatility declined, interest rate outlook became more uncertain, even as equity prices recovered and credit spreads stayed benign. The end of the earnings season along with lighter trading volumes in the second half of the month, reflecting normal seasonal patterns, also contributed to the modest weakness in convertible valuations. Most Neocloud convertibles came under pressure. Convertible new issuance resumed strongly during August, after a lackluster July. About $28 billion new paper came into the market globally pushing the total for the year so far to $172 billion, already surpassing the record levels for all of $166 billion in full year 2025. The full year of 2026 is likely to be a blockbuster year for new issues with the total expected to be above $200 billion. Among the noteworthy new issues were the $5.75 billion dual-tranche Nebius Group N.V. bonds, the $3 billion Moderna 0% convertible, the $2.5 billion Cloudflare 0% bond and the $1.0 billion ASE Technology Holdings convertible.

Portfolio Review

Turning to the names that helped or hurt performance, on the positive side the biggest gainer was the Silicon Motion Technology new issue. This was followed by the Lumentum Holdings bonds owned by the fund which gained following strong earnings from the company. Rounding out the top winners list was the Nebius Group N.V. bonds in the portfolio following the company's dual-tranche convertible deal. On the negative side of the ledger, the collection of CoreWeave convertibles was the worst performer following a sell-off in select Neocloud convertibles. This was followed by the Cloudflare 0% due 2031 issue which lost basis following the company's new issue convertible. The set of Akamai Technologies convertibles was another notable detractor following weaker than expected earnings.

In closing

During this period of valuation cheapening in the convertible market the Team has been patient, adding selectively to positions at lower price levels, notably in risk-return sets which are exhibiting attractive volatility characteristics. Post the summer we expect new issuance levels to continue to be strong which will present profitable opportunities in the Team's view. With the earnings season behind us we believe companies will re-enter debt management exercises allowing for special situation transactions for the fund. The portfolio is well positioned to benefit from the opportunities the Team believes are available currently.

Glossary

1 Statistics are based on unaudited and unreconciled information calculated by the risk team as of 31 August 2026 taking into account month-end redemptions. Allocations are subject to change.
2 Vega exposure is measured as a 1 volatility point change in the implied volatility of the investments. The result is quoted as a percentage of NAV.
3 Rho is measured as the percentage change in NAV for a 10 bp change in interest rates.
4 CS01 is calculated as loss/gain for the strategy if the credit spreads widen by one basis point. The strategy's position in every issuer is considered net of the long and short positions in that issuer and aggregated across the entire portfolio.
5 Duration is the sensitivity of the bond price to a change in interest rates.
6 A trading strategy reflects a particular investment thesis. For example, a "credit short dated gamma" strategy is one in which the strategy is long a short-dated convertible bond with a positive gamma profile and simultaneously short the underlying equity of the same issuer. The number of trading strategies shown represent 90% of the strategy's Long Market Value. Incubated strategies account for the remaining 10% of the strategy's Long Market Value.
7 YTP/ YTM refers to Yield to Put or Yield to Maturity, excluding securities with default/ distressed status, imminent corporate actions, and bonds trading with negative yields (otherwise defined as volatility trades).
8 Carry is the current yield of the strategy net of financing and stock rebates represented % of capital.
9 Average Implied Credit Spread is the credit spread of a bond over LIBOR, taking into account the value of the embedded option.
10 Gamma represents the rate of change in a convertible's delta per 1% move in the underlying stock. Options used for hedging purposes are not included in the gamma calculation.
11 Delta represents the sensitivity of convertible bonds held in the portfolio to a change in the underlying stock price.
12 Based on LMV of each position as a % of total LMV, and absolute NMV of each position as a % of total NMV.
13 The securities identified should not be considered a recommendation or solicitation to purchase or sell these securities. It should not be assumed that any investment in these securities was, or will be, profitable. There is no assurance that any securities discussed herein will remain in the portfolio. These securities do not represent the entire portfolio of an account managed pursuant to the strategy and in the aggregate may represent only a small percentage of an account's portfolio holdings.
14 Geographic compositions is calculated as % of NMV and is based on issuer/ parent country exposure. North America includes USA and Canada.
15 Jump-to-Default is calculated by dividing the portfolio's net market value by its long market value.
16 Premium is the amount by which the convertible bond price exceeds the current market value of the common stock into which it may be converted.
17 Average Bond Price is the weighted average bond price of the convertible bonds held in the portfolio.

The **Ongoing Charges** represent the ongoing costs to the fund from one year to the next which includes but is not limited to the fund's annual management fees, professional fees, audit fees, custody fees and custody transaction fees. It does not include any performance fee or portfolio transaction costs incurred buying or selling assets for the fund. The Ongoing charges may vary from year to year.

The **Risk Rating** is calculated in line with PRIIPs Regulation 2014 (the "PRIIPs Regulations").
