The Fund is exposed to the following materially risks: liquidity risk, operational risk and sustainability risk. Please refer to the Fund's prospectus for further information about the fund's risk exposure. The Fund promotes environmental and/or social characteristics within the meaning of Article 8 of SFDR. The decision to invest in the Fund should take into account all the characteristics or objectives of the Fund as described in its prospectus. Further information about the sustainability-related aspects of the Fund is available in the SFDR pre-contractual disclosures in the Fund's prospectus and the SFDR website disclosure available on https://paretoam.com/en/our-funds/.

*Reporting start date: 06.09.2001. Simulated returns from 06.09.2001–31.12.2005 are based on historical returns for unit class I, adjusted for management fees for unit class B. Returns from 31.12.2005–10.07.2015 are achieved in Pareto Verdi. The fund continues as unit class B in Pareto Aksje Norge. Simulated returns and risk figures are provided for illustrative purposes only. All figures are based on internationally recognised standards for publishing performance data. Historical returns are no guarantee for future returns. Future returns will depend, inter alia, on, market developments, the portfolio manager's skill, the fund's risk profile, as well as fees for subscription, management and redemption. Returns may become negative as a result of negative price developments. The performance data do not take account of the fees incurred on subscription and redemption of units/shares.

The return in September was flat, but well ahead of the market. September also marked the end of a very strong third quarter, with returns approaching double digits. For the most part, the advance has been driven by fundamentals: the majority of companies delivered very strong lap times during the second-quarter reporting season, with strong results, upward estimate revisions and good capital discipline.

The savings banks have been among the portfolio's strongest contributors. Norges Bank recently raised its policy rate to 4.50% and, more importantly, the projected rate path for 2027 and 2028 was raised by 20–40 basis points. Rates are therefore set to remain higher for longer than the market assumed before the summer, supporting net interest income and providing upside to current estimates. Competition in the mortgage market remains intense, but with a sharp focus on costs, low losses and solid capitalisation, the earnings outlook for the banks is good.

Elkem has received several important signals in its favour. The European Commission has opened an anti-dumping investigation into imports of silicon metal from China, and higher tariffs could be introduced as early as the first half of 2027. This could significantly lift European silicon prices while reducing substitution from ferrosilicon to silicon metal. For now, the investigation covers China only, but countries such as Angola and Kazakhstan also export silicon to the EU, and it would not be surprising if attention eventually turned to them as well. In addition, Elkem has been allocated an additional 1.3 million free emission allowances for the 2021–2025 period, and from 2026 the Norwegian plants will be put on an equal footing with their European competitors. This was expected, however, but it is positive to see it implemented.

In shipping, Wilh. Wilhelmsen Holding has had a strong period. The strength of the car-carrier market has lasted longer than many expected, and longer contract coverage at Wallenius Wilhelmsen provides better visibility on cash flows to the holding company. Steady share buybacks and dividends have contributed to a somewhat narrower discount to underlying values, although we still see considerable room for further narrowing.

Odfjell delivered a strong second quarter, with annualised earnings of around 25 kroner per share – less than five times earnings at the current share price. More recently, tanker rates have also surged. When product tanker rates are as strong as they are now, swing tonnage – the simpler chemical tankers that can just as easily carry clean petroleum products – is drawn into the product tanker market, tightening the market balance. For Odfjell, which operates the more advanced vessels in the segment, this provides a good foundation for higher earnings. At around four times expected earnings before interest, tax, depreciation and amortisation for 2027, and with an expected dividend yield of about 10%, the shares are attractively valued.

Energy markets remain unsettled. Supplies through the Strait of Hormuz have not normalised, Brent is trading at around 100 dollars per barrel, and refining margins – particularly for diesel – are at record levels. For TGS, however, the level of reserves rather than the oil price alone is the key driver. Reserve life for the largest oil companies has fallen from 13 to 9 years, and at the Pareto conference in September, TGS pointed out that offshore acreage awards in 2025 were more than twice the average of the preceding five years. Seismic activity follows directly after acreage awards, so we are still in the early stages of the exploration upturn. At the same time, the supply side has been cleaned up: the streamer fleet has been reduced from 65–70 to 15–17 vessels, and TGS has around 40% of the market. We expect higher budgets resulting from higher energy prices to support increased demand for seismic services, something we are already seeing signs of in an order book that is up by 78%.

If consensus estimates for the next two years prove correct, the current portfolio is on course for earnings growth of around 15% annually. Combined with an expected dividend yield of approximately 5%, this continues to indicate good return potential.

Pareto Asset Management seeks to the best of its ability to ensure that all information given in this report is correct, however, makes reservations regarding possible errors and omissions.
