Positive on semiconductor stocks post correction!

AUM
$133M

FUND PERFORMANCE

In August, Asian markets rebounded following the consolidation in July. The MSCI Asia ex Japan index gained 2.3% in € (+3.3% in $). In doing so, it outperformed the global equity index (+1.7% in €) and all other global indices (EuroStoxx +0.3%, S&P 500 +1.7% in €), apart from Japan's Topix (+2.8%). The major development this month was the rebound of Asian technology names after a strong correction in July. Hence Taiwan and Korea posted gains of about 6%. China is up slightly, particularly in domestic markets. In contrast, stock markets in India, and ASEAN are down for the month. In this volatile environment, **GemAsia gained 1.8% in € over the month and underperformed its index by 46bps.** The fund's performance was helped by the rebound in technology names in Taiwan and China but was weighed down by underperformance of our Chinese holdings (CATL -9% despite strong results, Bilbili and Jiangsu Hengrui -15% on mixed results).

FUND POSITIONNING

In August, we became overweight in Korea at 25.8% (vs. 23.1% in the index), as we increased our exposure in memory stocks, and diversified our portfolio into leading beauty technology company **APR Corp** (1% of the fund). The company benefits from market share gains of own brands and channel expansion in the US market. We increased our exposure to SK Hynix to 9.7% and Samsung Electronics to 9.9%, while cutting Hyundai Motor's weight to 1%. In **Taiwan**, we diversified our portfolio by initiating a new position in leading silicon IP vendor **eMemory** (1% of the fund), as licenses revenues gives the company better earnings visibility. We further increased our position in **Hon-Hai** (1.8%), as adoption of NPO and CPO switches improves growth visibility. Meanwhile, we reduced our exposure to **ASE Technology** to 6.1% and sold out our position in Quanta, to fund our additions. In **China**, we maintain our overweight position of 24.3% (vs. 23% in the index). We made a tactical switch from A to H shares of **BYD** (1%) and **Jiangsu Hengrui** (1%) as valuation discount between H and A shares has increased to 15%. We also reduced our exposure in Tencent (2%), after a disappointing outlook on AI monetization and higher capex spending. In **India**, we maintained our slight underweight to 11.8% (vs. 12.6% in the index), as we reduced our exposure in HDFC Bank (1%), as the bank seeks to appointment a new CEO.

MACRO VIEW

Rising global costs of capital dominated the investment mood in August, a month rounded off by the Jackson Hole gathering of central bankers. Developed market bond yields rose throughout the month, continuing a month-long trend and signaling both that global investment-led growth remains strong, and that fiscal spending remains unconstrained. August exports from Korea reached new record highs. Similarly, **TSMC** monthly sales for July were up 45% y/y, while Nvidia's Q2 earnings and 2028 guidance upgrade (implying 70% y/y revenue growth) were the ultimate proof of enduring strength in the AI investment cycle. No surprise then that across the region, **Korea** and **Taiwan** remained the standout markets, returning circa 6% each in Euro terms, with returns broadening to grid equipment (**Hyosung Heavy** +27%) and batteries, Korean beauty brands, and local banks. **Samsung Electronics** and **SK Hynix** announced frameworks to return excess cash to shareholders, which supported shares further. By contrast, performance in **China** was more mixed. A-shares were led by tech on the same AI optimism, but this trend was undermined by Q2 earnings that underwhelmed on margins. Hong Kong shares were pulled lower by fears over increasing capital needs among major internet platforms in support of the AI infrastructure buildout, not least **Alibaba** (-3.2%) where initial optimism at the rapid adoption of its Qwen model made way for concern over an equity raise to fund more rapid infrastructure rollout. The same cost of capital worries weighed on most of ASEAN and **India**, though Indian corporate results arrived much stronger than expected, explaining a surge in foreign investor purchases of Indian equities in the period. The month was capped by renewed hostilities in the straits of Hormuz and a more assertive tone from the Federal Reserve on reducing inflation, further trimming gains across the region, above all gold stocks after a stellar run.
