Flossbach von Storch - Multiple Opportunities II - HT

CATEGORY: MULTI ASSET
Data as per 30 September 2026

INVESTMENT STRATEGY

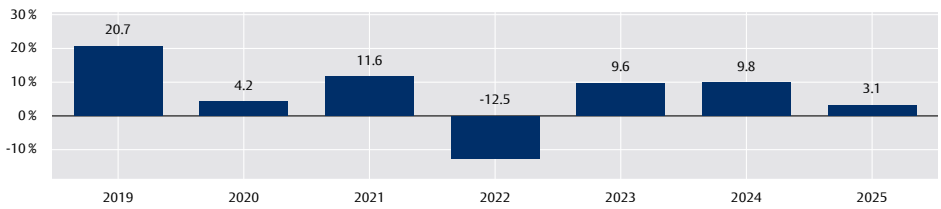

The Fund pursues an **active investment approach**. The Fund Manager can invest flexibly in the asset classes that appear attractive from his/her point of view in the respective capital market environment; the equity component is at least 25 per cent.

The basis for asset allocation is the Fund's own **independent investment world view**. The Fund deliberately does not follow any benchmark index. The primary objective is to generate sustainably attractive returns. Whether an individual investment is attractive is assessed within the framework of a thorough company analysis.

The **risk-reward ratio** is decisive for every investment decision; the potential return must clearly overcompensate for any risk of loss. The portfolio structure is based on the five guidelines of the Flossbach von Storch Pentagram diversification, quality, flexibility, solvency, and value. The composition of the portfolio is made by the Fund Manager exclusively in accordance with the criteria defined in the investment policy and is regularly reviewed and adjusted if necessary.

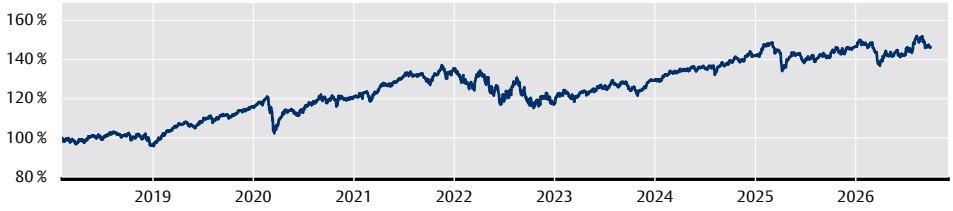

The investment strategy includes in-house valuation models, ESG integration, engagement, and the exercise of voting rights. In addition, exclusion criteria defined within the Sub-Fund's investment policy are taken into account. The sub-fund complies with the standards for credit quality and credit limits in the insurance industry. The Sub-Fund is categorized as an Article 8 product within the definition of the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the current Sales Prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Past performance is no indication of current or future performance. The performance data do not take into account the commissions and costs incurred in the issue and redemption of units, which may reduce the performance. Exemplary model calculation assuming a front-end load of 5%: an investor wishes to purchase units for 1,000 EUR (or CHF). With a maximum front-end load of 5%, he must pay a one-time fee of EUR 50 (or CHF) on purchase. Custody account costs may also be incurred. **Please refer to the cost details presented in this document to determine the maximum front-end load for the unit class of the subfund.** Where performance is compared to a benchmark, such a comparison is provided for information purposes only and does not imply any obligation on the part of the fund manager to achieve the level of the benchmark or replicate its performance.

MONTHLY COMMENTARY

The bond market took centre stage in September. Yields rose significantly in the USA and Europe, particularly in France, where concerns about the sustainability of public finances caused spreads over German Bunds to widen further. Robust US growth, persistent inflation and high energy prices prompted markets to price in further rate hikes. Following Chair Kevin Warsh's signals at Jackson Hole, the Federal Reserve unanimously raised its policy rate by 0.25 percentage points to 3.75 – 4.00% on 16 September, its first hike since July 2023. Relief from lower policy rates therefore appears unlikely for the time being. Corporate bond yields also rose, driven by higher government bond yields and growing issuance. Data-centre expansion requires substantial investment, increasingly financed through the bond market, meaning technology companies are competing with governments and other companies for capital. Gold came under pressure from higher yields, falling by 6.3% in US dollar terms and 4.2% in euro terms.

Equity markets held up comparatively well. Nvidia's strong results confirmed continued demand for AI infrastructure and supported the broader market. Amphenol, Ametek and Roper made the largest positive contributions to the portfolio, while CATL and Novo Nordisk were the main equity detractors. Gold made the largest negative contribution to the Fund's September performance. The rise in yields had little impact on the bond portfolio, as fixed-income investments accounted for just 2% until shortly before month-end.

Towards month-end, we took advantage of higher yields and increased the bond allocation to 10.4 %, its highest level for several years. We invested exclusively in corporate bonds, split equally between euro- and US dollar-denominated securities, yielding between 4.4% and 6.1%, respectively. At these levels, we believe high-quality corporate bonds once again offer an alternative to reliable dividend-paying equities. While yields could rise further as inflation, Fed policy and growing issuance continue to shape the market, current income provides a meaningful buffer against further price declines. We remain committed to the AI theme, while pursuing a diversified approach. Strong investment continues, but increasing debt financing also adds to risks and contributes to the yields we now seek to lock in through bonds. Our gold (not physical) position remained unchanged despite the pullback. Higher yields are a short-term headwind, but concerns about government debt on both sides of the Atlantic continue to support gold's inclusion in the portfolio.

Flossbach von Storch - Multiple Opportunities II - HT

OPPORTUNITIES

+ Flexible investment policy without benchmarking.
+ Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals [indirect]). Market potential can be exploited by investing across a wide range.
+ Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
+ Derivatives can be used to increase potential yields.
+ Precious metals [indirect] (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. The ESG criteria restrict the selection of target investments in terms of category and number, sometimes considerably. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the key information document (PRIIP-KID) and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net subfund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium- to long-term: Minimum 4 years

RISK INDICATOR

Lower risk — Higher risk

The risk indicator assumes you keep the product for a minimum of 4 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator ("SRI") is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. Unusual market conditions could arise, for example, due to currency, creditworthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus. We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the Fund's capacity to pay you. This product does not include any protection from future market performance. Please refer to the 'Risk' section of the sales prospectus for more details.
