Performance

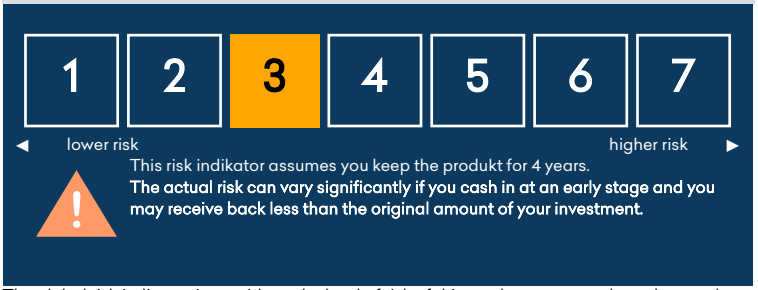

Explanations and modeling; assumption: an investor wishes to purchase units for EUR 1,000.00. With a maximum sales charge of 5.00%, the investor has to pay EUR 1,050.00. The gross performance (BVI method) includes all costs incurred at the fund level, the net performance also includes the sales charge; additional costs may be incurred at the investor level (e.g. custody costs). Since the sales charge is only levied in the first year, the net/gross amount shown is different only in this year. Past performance is not a reliable indicator of future performance.

Investing in investment funds carries with it the risk of price losses and currency losses, so that the future value of units may rise or fall in relation to their value at the time of acquisition. In so far as any statements are made concerning market developments, returns, price gains or other instances of asset growth, as well as risk ratios, these merely constitute forecasts for which we accept and assume no liability as regards the actual occurrence of the events predicted. In particular, previous performance, simulations and/or forecasts cannot be taken as a reliable indicator of future performance.

Full details concerning the Fund can be found in the key investor information and the sales prospectus, together with the latest audited annual report and, where data exist which are more recent than those contained in the latest annual report, the latest half-yearly report. These documents constitute the sole binding basis for any acquisition. In so far as any tax or legal interests are affected, these should be discussed by the addressee with his/her tax adviser or lawyer.

Morningstar RatingTM:

The Morningstar RatingTM for funds, or ""star rating"", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.
