September 2026 Fact Sheet

This is a marketing communication. This is not a contractually binding document. Please refer to the prospectus of the UCITS and to the PRIIPs KID before making any final investment decisions.

Fund Description

Lazard Rathmore Alternative Fund is a hedged convertibles portfolio, best described as convertible arbitrage, where typically a long convertible bond position is hedged with a short stock position in the same company. Position-level hedges are actively traded in order to monetize market volatility. In addition to generating returns from credit and volatility ("betas"), the team's specialized approach focuses on extracting value from special situations and events ("alpha"), which supplements the traditional drivers of return to convertible arbitrage strategies and allows for a strategic, long-term approach to investing in the space.

Risk Rating

Key Risks Related to the Fund

There is no capital guarantee or protection of the value of the Fund. The value of your investment and the income from it can go down as well as up and you may not get back the amount you originally invested.

While the Fund may seek to profit from the prices of shares falling (i.e. taking short positions or shorting) as well as rising in value through the use of FDI, it is possible for the Fund to lose value on both the long and short positions, thereby increasing the risk of the Fund.

There are additional risks relating to the use of derivatives - the Fund invests in derivatives for the purposes of reducing exposure (hedging), gaining greater exposure, and speculating in the value of underlying investments. The use of derivatives to gain greater exposure to investments rather than by direct investment can increase the possibility for profit but also increase the risk of loss.

Key Risks Related to the Share Class

Shareholders who acquire shares after commencement of a performance period may be liable for a performance fee, even where there has not been an appreciation of performance of the relevant share class during the period in which those shares were actually held. Performance fees may be paid on unrealised gains which may subsequently never be realised.

Your shares will be hedged with the aim of reducing the effect of exchange rate fluctuations between their denominated currency and the base currency of the Fund. This may not completely eliminate currency risk and therefore, any residual risk may affect the performance of your shares.

See "Risk Factors" in the UCITS' Prospectus and Fund Supplement for more information about risks.

This Fund is actively managed. The Fund's performance is measured against the performance of any one or more of the HFRX Relative Value Fixed Income Convertible Arbitrage Index, S&P 500 Index, Russell 2000 Index, Bloomberg US Agg Total Return Value Unhedged USD, ICE BofA Global 300 Convertible Index, ICE BofA US High Yield Index and MSCI World Index (the "Benchmark"), which the Investment Manager has assessed to be the most appropriate Benchmark for measuring performance. The Fund is not constrained by the Benchmark as it has flexibility to invest in securities and asset classes not included in the Benchmark.

Commentary

Market Review

The month was a risk off month in most asset classes. Oil prices rose sharply during the first half of the month, as oil futures rose from about 86 at the end of August to nearly 106 by mid-September, driven by renewed conflict in the Middle East. Interest rates ended September at their highest levels since 2002, driven by the increase in the benchmark rate and the hawkish forward commentary by the Federal Reserve.

The S&P 500 Index posted a return of -0.35% in September, marking the fifth month of negative performance year-to-date for the index. While the decline in the S&P 500 Index was modest, it was not reflective of the broader decline in stocks. The equal-weighted S&P 500 Index (the SPW Index) lost -4.81% and the Russell 2000 Index (IWM ETF), which is more reflective of the stocks in the US Convertible universe, lost -5.21%. Mega Cap Technology stocks fared well for the month, pushing the Nasdaq Composite up +1.93%. Excluding the "Mag 7", the S&P 500 Index posted a return of -2.2% for the month. Financials, Metals & Mining, Materials, Consumer Discretionary, Home builders, and Utilities were the notable underperforming sectors. The lone positive sector in September was Semiconductors.

Reflecting the selloff in big parts of the equity market, the S&P 500 Volatility Index, the VIX Index, rose to end the month at 16.34, up from the prior month end level of 14.92. The volatility of the individual components of the S&P 500, as measured by the VIX EQ Index, rose to end the month at 39.83 from the August month end level of 35.80. This month's increase reverses a two-month trend of lower stock volatility.

Interest rates rose sharply during the month following the 25-bps increase in the Funds target rate to 4% by the Federal Reserve. Yields of the 5-, 10-& 30-year treasury bonds rose to levels not seen since 2002. The 5-year rate rose to 5.09% (+59 bps for the month), the 10-year to 5.28% (+53 bps), and the 30-year to 5.63% (+39 bps). The 2-year rose +55 bps to end the month at 4.89%, which is the highest level since 2007. Rate volatility as measured by the ICE BofA MOVE Index jumped to 110.45 from 75.32 at the end of August, reaching its highest level since the end of March 2026.

The US High Yield market was negatively affected by the rise in yields. In addition, the new issue high yield market wobbled toward the end of the month pushing the corporate credit spreads implied in the High Yield index credit spreads wider for the month by +48 bps to +333 bps. Overall, the ICE BofA U.S. High Yield Index returned a negative -2.49% for the month, the worst monthly return since September 2022.

The convertible market basis cheapened during the month due to a combination of higher yields, compression in stock volatility in AI Neocloud and Technology names and wider credit spreads. Convertible basis (the change in the bond price adjusted for the stock hedge) declined by almost a point on average for the month, making the month the worst since October 2023. All convertible profiles saw a decline in basis. The worst performing were those priced below 80 (credit sensitive names) which weakened multiple points. Volatility profiles, those priced between 100 to 200, saw an impactful contraction in basis as well.

A bright spot during the month was the continued strong new convertible bond issuance globally. A total of $27 billion was issued, of which $14 billion was in the US, $3 billion in Europe and $10 billion in Asia. The year-to-date total issuance is now at close to $200 billion, an all-time record surpassing the full year total for 2025 of $166 billion. The notable deals during the month were the $3.75 billion 2 tranche deal issued by Snowflake, the $4.2 billion deal by Coreweave, the CNY 20 billion Convertible issued by Z.AI Co. and the $1.8 billion 2 tranche deal from United Microelctronics Corp.

Portfolio Review

When we look at the individual performers, on the positive side, the leading performer was the interest rate hedges set up by the Team that gained as rates rose significantly. Following this was the Guidewire 1.25% convertible which gained as the company's stock sold off significantly after disappointing fiscal first quarter results early in the month. Another notable winner was the Wayfair 3.25% convertible, which gained basis as the bond's low premium expanded as the market's perception of the call timing changed.

On the other side of the ledger the largest detractors were the Applied Optoelectronics 2.75% and the Datadog 0% convertibles due to a significant decline in their respective underlying stock volatilities. Rounding out the detractors list is the GoI Finance complex of bonds owned by the fund which declined due to the significant weakness in perceived lower quality credits during the month.

In closing

Looking ahead, the third quarter earnings season is about to begin, which is likely to be a catalyst to reverse the trends in stock volatility seen over the past two months. In addition, as an early sign of stabilization in the market level volatility, both at the S&P 500 Index (VIX Index) level and at the stock component level (VIXEQ Index), bottomed during the month and inflected to end higher at month end. The record level of new issuance is likely to stay strong for the rest of the year, which will help performance during the home stretch of the year. Once companies come off their blackout periods, we expect corporate balance sheet activity to improve after a period of subdued activity. The Team believes that the current market offers a lot of opportunity to take advantage of cheaper Convertible prices and lower stock prices and is acting accordingly.

Glossary

1 Statistics are based on unaudited and unreconciled information calculated by the risk team as of 30 September 2026 taking into account month-end redemptions. Allocations are subject to change.
2 Vega exposure is measured as a 1 volatility point change in the implied volatility of the investments. The result is quoted as a percentage of NAV.
3 Rho is measured as the percentage change in NAV for a 10 bp change in interest rates.
4 CS01 is calculated as loss/gain for the strategy if the credit spreads widen by one basis point. The strategy's position in every issuer is considered net of the long and short positions in that issuer and aggregated across the entire portfolio.
5 Duration is the sensitivity of the bond price to a change in interest rates.
6 A trading strategy reflects a particular investment thesis. For example, a "credit short dated gamma" strategy is one in which the strategy is long a short-dated convertible bond with a positive gamma profile and simultaneously short the underlying equity of the same issuer. The number of trading strategies shown represent 90% of the strategy's Long Market Value. Incubated strategies account for the remaining 10% of the strategy's Long Market Value.
7 YTP/ YTM refers to Yield to Put or Yield to Maturity, excluding securities with default/ distressed status, imminent corporate actions, and bonds trading with negative yields (otherwise defined as volatility trades).
8 Carry is the current yield of the strategy net of financing and stock rebates represented % of capital.
9 Average Implied Credit Spread is the credit spread of a bond over LIBOR, taking into account the value of the embedded option.
10 Gamma represents the rate of change in a convertible's delta per 1% move in the underlying stock. Options used for hedging purposes are not included in the gamma calculation.
11 Delta represents the sensitivity of convertible bonds held in the portfolio to a change in the underlying stock price.
12 Based on LMV of each position as a % of total LMV, and absolute NMV of each position as a % of total NMV.
13 The securities identified should not be considered a recommendation or solicitation to purchase or sell these securities. It should not be assumed that any investment in these securities was, or will be, profitable. There is no assurance that any securities discussed herein will remain in the portfolio. These securities do not represent the entire portfolio of an account managed pursuant to the strategy and in the aggregate may represent only a small percentage of an account's portfolio holdings.
14 Geographic compositions is calculated as % of NMV and is based on issuer/ parent country exposure. North America includes USA and Canada.
15 Jump-to-Default is calculated by dividing the portfolio's net market value by its long market value.
16 Premium is the amount by which the convertible bond price exceeds the current market value of the common stock into which it may be converted.
17 Average Bond Price is the weighted average bond price of the convertible bonds held in the portfolio.

The **Ongoing Charges** represent the ongoing costs to the fund from one year to the next which includes but is not limited to the fund's annual management fees, professional fees, audit fees, custody fees and custody transaction fees. It does not include any performance fee or portfolio transaction costs incurred buying or selling assets for the fund. The Ongoing charges may vary from year to year.

The **Risk Rating** is calculated in line with PRIIPs Regulation 2014 (the "PRIIPs Regulations").
